

*Presenting the latest in long-lasting,
high performance surfactant technology.*

WETTING AGENTS

PRIME SOURCE

NEW! PENFILTRATE SELECT™

A blend of 4 polymers in a precise ratio to encourage uniform, increased moisture penetration and some moisture retention for up to two weeks. The formulation ensures maximum uptake of water, and encourages improved rooting and nutrient uptake leading to greater plant health and uniformity of moisture in the soil profile.

 2 x 2.5 gal  20 - 32 oz/A every 7 - 10 days

TURF WET LT SELECT™

A long-term, 120-day soil surfactant.

Combining two complimentary block surfactants together with a graft polymer surfactant, Turf Wet LT Select represents the latest technology in soil surfactants by providing up to 120 days of performance.

This new soil surfactant technology provides for increased hydration characteristics while compensating for microbial degradation of the polymer. The combination results in exceptionally uniform hydration, increased water movement, reduction in localized dry spot (LDS) and increased movement through the root zone.

The grafted polymer technology found in Turf Wet LT Select is radically different from any other long-term surfactant on the market and truly represents the leading edge of longevity and high performance surfactant technology for demanding turf environments.

 2 x 2.5 gal  Split application: 8 oz/1000 sq ft in min. of 2 gal/water
Single application: 16 oz/1000 sq ft in min. of 5 gal/water

TRI-WET SELECT™

A 30-day, multi-component soil surfactant complex designed to reduce LDS (localized dry spots) and drought stress. The multi-chemistry design of Tri-Wet Select helps mitigate hydrophobic soils, ensures uniform hydration characteristics, and facilitates rapid re-wetting without creating excess moisture in the top few inches of the soil profile.

When used on a consistent, monthly basis. Tri-Wet Select provides superior soil moisture management and should be safe for application on all turf types, including highly maintained golf greens.

 2 x 2.5 gal  4 - 6 oz/1000 sq ft depending on application area
See label for additional use rate information.

Product Benefits

- Improves penetration and infiltration of water into the soil
- Reduces puddling and the amount of water lost to runoff and evaporation
- Economical water management for large areas of turf
- Increase moisture delivery to the root system
- Reduced LDS (localized dry spot)
- Increase the efficiency of irrigation

Product Benefits

- Extremely uniform hydration characteristics
- Reattaches to soil particles, unlike traditional surfactants
- True 90-day plus surfactant – up to 120 days of performance
- Increased vertical and lateral water movement
- Reduced LDS (localized dry spot)
- Safe, non burning formulation
- Combination of 3 polymers for unsurpassed performance

Product Benefits

- Ensures uniform hydration characteristics
- Enables rapid re-wetting without excess moisture
- Increased vertical and lateral water movement
- Reduced LDS (localized dry spot)
- Non-burning formulation
- Multi-component complex for unsurpassed performance

TURF WET SELECT™

The latest technology in non-ionic surfactants and soil wetting agents. The unique combination of surfactant complexes that make up Turf Wet Select make it radically different than most 30-day soil surfactants. It provides extremely uniform hydration, enhanced water distribution, better drainage and more balanced air to water ratios in the soil profile.

The diverse construction of the Turf Wet Select molecule, combined with the blend of several complementary surfactant components, places it above the competitive products in the market and provides turf managers with a supreme and consistently performing product.

2 x 2.5 gal

Tees and greens: 6 oz/1000 sq ft (monthly)

Fairways, lawns, athletic fields: 2 gal/A (90 gal min water)

PEL-WET SELECT™

Pel-Wet Select pellets are a convenient way to spot treat and supplement your normal turf moisture management program. Containing a blend of high end surfactants totaling almost 100% active ingredient, Pel-Wet Select pellets are the quick and easy way to remedy turf showing signs of heat wilt, stress and localized dry spot conditions.

Pel-Wet Select pellets make touching up problem areas easy, providing temporary relief of localized dry spots and other water movement issues with no extra labor costs. Pel-Wet Select pellets can be applied in any condition and in conjunction with your current water management products. Simply drop a pellet in the convenient applicator. One pellet will cover about 2 - 3 greens. Pel-Wet Select pellets are designed to maintain their integrity and not crumble apart during use, making it possible to re-use partially used pellets. Defoaming agents are added to each pellet to ensure clean product delivery.

Can be applied with a standard pellet hose end adapter unit that fits a 1-inch hose.

0.5 lb box/
12 pellets

Apply monthly or as needed

Product Benefits

- Extremely uniform hydration characteristics
- Unique tri-block copolymer combined with high molecular weight surfactants
- Increased efficiency of water use
- Dew suppression
- Reduced LDS (localized dry spot)
- Reduced water stress
- Non-burning formulation
- Multi-component complex for unsurpassed performance

Product Benefits

IMMEDIATE EFFECTS

- Reduced heat stress
- Prevents heat wilting
- Spot treatment for LDS (localized dry spots)

CONVENIENT AND EASY PELLET FORM

- Each 8 oz pellet contains 100% AI
- Makes applications quick and easy – about 10 minutes per green
- Each pellet contains defoaming agents for clean application
- Designed to not crumble apart during use
- Non-burning formulation
- Compatible with existing water management products
