**Field Trial Summary**

**Fluazinam 40SC Select Fungicide University Study**

Dr. Paul Koch, University of Wisconsin-Madison

**Trial Objective**
To determine the efficacy of Fluazinam 40SC Select compared to Secure® for controlling dollar spot caused by the fungus *Clarierea* spp. on a creeping bentgrass putting green.

**Materials and Methods**
- Trial was initiated on May 23rd 2019 and concluded on August 21st 2019.
- Each product underwent 4 replications. There was an untreated controlled plot for fungicide comparisons. Testing plots were 3 ft by 5 ft.
- Fungicides were applied every 14 day for the duration of the study.

- Number of lesions were counted in the center of each plot.
- Turf Quality ratings are based on a 1-9 scale: 9 = best quality, with 6 being commercially acceptable.

**Trial Results and Conclusions**
- Fluazinam 40SC Select (0.5 oz per 1000 ft²) provided control of Dollar Spot statistically equal to Secure. Both fungicides provided excellent season long disease suppression.
- Fluazinam 40SC Select (0.5 fl oz per 1000ft²) had great turf quality ratings, all above commercially acceptable levels. Secure fell below commercially acceptable turf quality.
