

# ABAMECTIN 0.15EC SELECT<sup>™</sup>

*Insecticide/miticide provides excellent control of chewing insects*

**ACTIVE INGREDIENT**

Abamectin – Group 6

**% ACTIVE INGREDIENT**

Abamectin . . . . . 2.0%

**FORMULATION**

Emulsifiable concentrate

**CHEMICAL FAMILY**

Mixture of avermectins

**BRAND ALTERNATIVE**

Avid<sup>®</sup>

**MODE OF ACTION**

Disrupts activity in nerve and muscle cell

**RESTRICTED USE**

Yes

**SIGNAL WORD**

Warning

**PACKAGING**

8 x (4 x 1) qt, 4 x 1 gal

**LABELED USES**

Shadehouse, greenhouse and field-grown ornamentals

Foliage plants

Christmas trees

Other woody ornamentals

**Abamectin 0.15EC Select<sup>™</sup>** controls a variety of mites and other chewing insects, and is an effective tool in combating pyrethroid resistant insects. Due to its unique mode of action, it presents low risk to mammals, while being particularly effective against mites, aphids, whiteflies and other chewing insects. Combining **Abamectin 0.15EC Select<sup>™</sup>** with a horticultural spray oil may improve residual control.

**PRODUCT BENEFITS**

- Unique mode of action
- Low phytotoxicity risk
- Effective resistance management tool
- Convenient formulation
- Broad ornamentals label

**IMPORTANT: ALWAYS READ AND FOLLOW LABEL INSTRUCTIONS.**

# ABAMECTIN 0.15EC SELECT™

*Excellent mite and aphid control*

## APPLICATION INFORMATION

---

Read and follow all label directions. Applying **Abamectin 0.15EC Select™** in a manner that is inconsistent with the label may result in decreased control of listed pests or damage to plants. This product is an emulsifiable concentrate and must be mixed with an adequate amount of water and applied as a foliar spray in order to achieve acceptable coverage.

Phytotoxicity to **Abamectin 0.15EC Select™** has been tested on a broad variety of ornamentals. Not all combinations of this product with various mix partners (such as adjuvants, surfactants or other pesticides) or series of applications of this product and other additives have been evaluated, so a test application to a portion of the plant(s) is advised prior to making a broader application, to assess the potential for damage to plants.

Aphids, thrips and whitefly will be killed through direct contact with **Abamectin 0.15EC Select™** application solution. Apply this product when pests first appear in the immature, young stage of development.

**Mites:** Combine the use rate listed on the label with 200-400 gallons of water per acre. For control of Tarsonemid mites, newly developing tissue may require multiple treatments.

**Leafminers:** Apply **Abamectin 0.15EC Select™** when adult leafminers start egg laying in new foliage in order to achieve control of leafminer larvae.
