

IMIDACLOPRID 75WSP SELECT™

Broad-spectrum insecticide

ACTIVE INGREDIENT

Imidacloprid – Group 4

% ACTIVE INGREDIENT

Imidacloprid 75%

FORMULATION

Water soluble powder

CHEMICAL FAMILY

Neonicotinoid

BRAND ALTERNATIVE

Premise®, Merit®

MODE OF ACTION

Binds to nicotinic acetylcholine receptors causing over stimulation and disruption of nerve transmissions

RESTRICTED USE

No

SIGNAL WORD

Caution

PACKAGING

4 x (4 x 1.6 oz), 88 x 1.6 oz

LABELED USES

- Golf courses
- Sod farms
- Commercial turf areas
- Residential turf
- Industrial turf areas
- Municipal turf areas
- Landscape ornamentals
- Interior plantscapes

IMPORTANT: ALWAYS READ AND FOLLOW LABEL INSTRUCTIONS.

Imidacloprid 75WSP Select™ systemic insecticide provides long-lasting control on a broad spectrum of insect pests in turf, landscape ornamentals, fruit and nut trees, and interior plantscapes. With both curative and preventative action, it provides quick knockdown and superior control of pests such as white grubs, crane flies, leafminers, mealybugs and more.

PRODUCT BENEFITS

- Proven performance – long-lasting insecticide
- Broad spectrum systemic action
- Curative and preventative properties
- Convenient water soluble pouches for easy tank mixing and measuring

IMIDACLOPRID 75WSP SELECT™

Broad-spectrum insecticide

APPLICATION INFORMATION

Turfgrass

Imidacloprid 75WSP Select™ to control insect pests on turfgrass in residential lawns, business and office complexes, shopping complexes, multi-family residential complexes, golf courses, airports, cemeteries, parks, playgrounds, and athletic fields. The active ingredient in this product has enough residual activity so that applications can be made preceding the egg laying activity of the target pests. Best control is achieved when applications are made prior to egg hatch of the pests. Sufficient irrigation or rainfall is required to move the active ingredient through the hatch.

Do not apply when infested turfgrass areas are waterlogged or soil beneath turf is saturated with water. These conditions prevent thorough and consistent distribution. Best results are achieved when rainfall or irrigation after application will penetrate vertically in the soil column carrying the active ingredient into the zone where insects are normally located.

Restriction

- Do not exceed a total of 8.6 ounces application (0.4 lb of active ingredient) per acre, per year.

Ornamentals

Imidacloprid 75WSP Select™ can be applied to ornamental plants in commercial and residential landscapes and interior plantscapes.

Imidacloprid 75WSP Select™ is a systemic insecticide that is transported within the plant system from the roots to upper foliage. Product must be applied into a growing area of the plant that allows absorption of the active ingredient. Adding soluble nitrogen type fertilizers to the spray solution when appropriate can promote the uptake of the active ingredient.

Application can be made by foliar application or soil applications including soil injection, drenches, and broadcast sprays. Foliar applications offer locally systemic activity against insect pests. The systemic translocation of active ingredient will be slower when applied to woody plants with soil applications. This delay can take 60 days or longer depending on species and size of plant. To offset this, make applications before anticipated pest infestation.

Restriction

- Do not exceed a maximum application rate of a total 8.6 ounces (0.4 lb of active ingredient) per acre, per year.

Turf pests controlled

Billbug larvae	White grubs, including black turfgrass atenius beetles	Japanese beetles	Oriental beetles
European crane flies		May and June beetles	Southern masked chafers
Hairy chinch bugs	European chafers	Northern masked chafers	
Mole crickets			

Ornamental pests controlled

Adelgids	Emerald ash borers	Leafhoppers	Sawfly larvae
Aphids	Hemlock woolly adelgid	Leafminers	Scale insects
Asian longhorned beetles	Japanese and other leaf-feeding beetles	Mealybugs	Thrips (suppression)
Borer		Pine tip moths	Vine weevils
Elm leaf beetles	Lace bugs	Royal palm bugs	Whiteflies
